Intelli-Tech joined our team while we were in the process of designing our new state of the art collocation facility in the South Bay. Intelli-Tech's comprehensive approach to solving our facility alarm systems included a Fike Cybercat building fire alarm system, a PermaAlert leak detection system, VESDA Early Warning Detection systems for the pre-action systems and a Fike Precise Touch/Vision computer graphics package for our NOC and lobby.

The real time status of every Fire Alarm device, VESDA Detector and Pre-Action system in our facility is available at a single location in our NOC. The Fike Precise Touch/Vision system graphically locates all of the addressable devices in the facility which allows us to quickly access and react to any device that goes into trouble, supervisory or alarm.

It's great to have a vendor partner who can provide a fully integrated fire alarm solution and the people from Intelli-Tech really know their business !

Bob Montreuil, VP of Operations
